Priority Applications (No Type Date): DE 2835301 A 19780811

Abstract (Basic): DE 2835301 A

The rotating brush (12) and the front part of the vacuum cleaner housing (11) can be raised up by a suitable lift mechanism (1, 2) mounted in the housing (11) near the entrance to the suction hose pipe (24) so that the cleaning action is then direct by the suction hose and not by the brushes. The lift mechanism (2) preferably has a short pipe (3) which is designed as a strip which can be moved through an opening in the base plate of the machine housing (11). As the strip moves down the brushes and front part of the housing are raised up from the floor. The mechanism can be actuated by switch cams (6) on the connector pipe (28).

Title Terms: VACUUM; CLEAN; CONVERT; BRUSH; CHANGE; SUCTION; HOSE; CLEAN; LIFT; MECHANISM; RAISE; BRUSH; FRONT; HOUSING
